

2004 Idaho Public Water System Annual Compliance Report

Purpose of the Report

The purpose of this report is to inform the public of the violations of the national primary drinking water regulations by public water systems (PWS) in Idaho for the period of January 1, 2004 through December 31, 2004.

The report defines the quality and safety of drinking water in our state. The Idaho Public Water System Annual Compliance Report (ACR) is also a requirement of the 1996 Amendments to the federal Safe Drinking Water Act as outlined in Section 1414 (c)(3)(A)(I).

Drinking Water in Idaho

In Idaho, there are 2,020 regulated public drinking water systems serving 1,136,042 people.

Approximately 95% of the state's drinking water comes from groundwater. Surface water supplies the remaining 5% from sources such as streams, rivers, springs, and reservoirs.

Overall, Idaho's drinking water is quite safe, however, local contamination is being discovered in some of the state's groundwater sources.

Idaho's surface water sources are also continually subject to natural and human sources of microbial contamination.

Most of Idaho's surface waters are of good to high quality, however, because of their origin in natural watersheds of the state's national forests.

As a result, chemical contamination is not usually a concern, but naturally occurring pathogens such as *Giardia* and *Cryptosporidium* are commonly found in surface water. In parts of Idaho, surface water may also be subject to contamination from agricultural and urban runoff that includes sediment, pesticides, fertilizers, microbial contaminants, and nutrients.

Idaho water purveyors and the Idaho Department of Environmental Quality (DEQ) continue to strive for safe and reliable drinking water for the consumers of the state.

2004 PWS Violations in Idaho

In calendar year 2004, there were 2,104 violations of the Idaho Rules for Public Drinking Systems.

Of this number, 1,893 (90%) were for monitoring and reporting violations; 187 (9%) were for exceedances of maximum contaminant levels (MCLs); and 24 (1%) were for surface water treatment technique violations.

Of the MCL violations, 171 were for microbiological contamination and 16 were for exceedances of regulated chemicals.

It is important to note that the most frequent violations (1,893) were for failure to monitor and report water quality test results, and not because of a violation of a standard (i.e., an actual contamination incident).

When compared to calendar year 2003, however, there is a significant increase in the number of monitoring and reporting violations in the “chemical contaminant group” of violations. There are two main reasons for this increase in 2004:

1. **Triennial Monitoring Cycle.** The increase in chemical contaminant monitoring and reporting violations for 2004 is due to the triennial monitoring cycle, which ended in calendar year 2004. To further explain:
 - a) **Sampling for most regulated chemicals is required every three years** from each sampling point for groundwater supplies, and annually from each sampling point for surface water supplies unless a system has a monitoring waiver. Even though sampling takes place over a three-year compliance period, *failures-to-monitor are not reported to SDWIS/Fed as a violation until the end of the three-year cycle*. For this reason, the data show a higher number of violations in the “Monitoring” category for the “chemical contaminant group” violations when compared with calendar year 2003 (see page 8).
 - b) **The method of counting chemical contaminant violations** tends to indicate a much higher level of non-compliance than actually exists. For example, in the volatile organic chemicals (VOCs) category, each missed VOC monitoring sample gets counted as 22 separate monitoring and reporting violations for each of the 22 regulated compounds measured in a single sampling, and some systems have several entry points that must be monitored. The situation is similar for synthetic organic chemicals (SOCs).

It should be noted that although failure to monitor may not be as critical as an actual MCL exceedance, it is a significant violation because it is impossible to confirm that the water is safe to drink when monitoring results are missing.

2. **SDWIS/State Updated.** Through the federal Safe Drinking Water Information System and the state’s data system, Idaho has improved its database for reporting and tracking violations. In years past, there may have been a problem of under-reporting, but with improved data verification procedures more actual violations are being reported.

Variances and Exemptions

To date, Idaho has not granted any variances and exemptions as allowed by federal regulations.

Federal Safe Drinking Water Program

The U.S. Environmental Protection Agency (EPA) established the Public Water System Supervision (PWSS) Program under the authority of the 1974 Safe Drinking Water Act (SDWA).

The SDWA allows states to administer their own PWSS programs, and the authority to run the program is called “primacy.” To receive primacy, states must meet certain requirements laid out in the SDWA, including the adoption of drinking water regulations that are at least as stringent as the federal regulations and a demonstration that they can enforce the program requirements.

In 1978, EPA awarded Idaho primacy. The Idaho DEQ is now charged with the responsibility of program implementation.

Under the 1986 and 1996 Amendments, EPA sets national limits on contaminant levels in drinking water to ensure that the

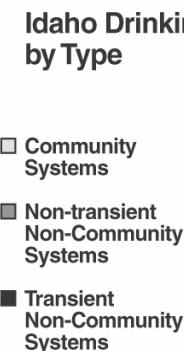

water is safe for human consumption. These limits are known as maximum contaminant levels (MCLs). For some regulations, however, EPA establishes treatment techniques (TTs) in place of MCLs to control unacceptable levels of contaminants in water.

The federal standards for MCLs, treatment techniques, and monitoring requirements are adopted, in turn, as state standards.

The EPA also sets standards on how often public water systems must monitor their water for contaminants and when to report the monitoring results to the states.

Additionally, EPA requires public water systems (PWSs) to monitor for unregulated contaminants in order to provide data for future regulatory development. Finally, EPA requires PWSs to notify the public when the systems have violated these regulations.

In Idaho, there are 2,020 regulated public drinking water systems: 748 (37%) are community water systems (CWS); 240 (12%) are non-transient non-community systems (NTNCS); and 1,032 (51%) are transient non-community systems (TNCS).

State Program Provides Technical Assistance to Systems

The DEQ provides, in cooperation with the state's seven district health departments, a

Public Drinking Water Systems Defined

Public Water Systems

A Public Water System (PWS) is a system for the provision of water to the public for human consumption through pipes or other constructed conveyances, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals at least 60 days out of the year. A public water system can be one of three types:

- **Community Systems (CWS)** serve at least 15 service connections or 25 people year-round in their primary residences.
- **Non-transient Non-community Systems (NTNCWS)** serve at least 25 of the same persons over six months per year (e.g., schools, or hospitals that have their own water source).
- **Transient Non-community Systems (TNCWS)** serve an average of at least 25 persons (but not the same 25) less than six months per year (e.g., campgrounds or highway rest stops that have their own water source).

variety of services to public water systems. For example, DEQ works with systems to ensure compliance with minimum state requirements, conducts sampling surveys and on-site visits to prevent public health problems, reviews water system plans and specifications, issues monitoring waivers, conducts training sessions, holds public information meetings, loans specialized monitoring equipment, publishes informational brochures and the quarterly *Idaho Drinking Water Newsletter*, contracts for statewide operator training classes, and distributes a technical assistance notebook to all systems.

- **Assisting Systems When Violations Occur.** When acute MCL violations are discovered, DEQ (in conjunction with the state's seven district health departments) provides immediate assistance to the water system to help

ensure that the public has adequate information about what precautions may be necessary, such as boiling water or using bottled water. DEQ assists with the lesser violations by providing information about what is necessary to return to compliance (RTC).

When bacteriological contamination is found, DEQ assists in determining the cause and recommending necessary corrective measures.

Most Idaho chemical contamination occurrences are low enough in concentration and short enough in duration that the problem is corrected before a violation actually occurs. The exception to this situation occurs when nitrate or nitrite exceeds the established standards.

Not only does the state provide localized technical assistance to systems (see above), it also provides assistance to systems to improve compliance through the following state programs:

- **Source Water Protection.** The first step in a multiple-barrier approach to drinking water protection is preventing contamination of drinking water sources. (In May 2003, DEQ successfully completed source water assessments for all active public water sources in accordance with an EPA-approved plan and prioritization schedule.)

DEQ is continuing to perform source water assessments for new public water sources, but the primary emphasis of the Source Water Protection program is focused on the implementation of local and regional source water protection activities and projects.

DEQ also continues to coordinate with the Idaho Rural Water Association, the Association of Idaho Cities, and other

regional and local governmental and non-governmental entities to provide source water protection assistance and education to interested communities.

- **Drinking Water State Revolving Fund (SRF).** The 1996 Amendments created the SRF loan program to enable states to help water systems finance infrastructure improvements that are needed to solve compliance and public health concerns.

In calendar year 2004, Idaho provided over \$10.4 million in loans to drinking water systems.

- **Capacity Development Program.** DEQ employs a Capacity Development Coordinator to implement Idaho's Capacity Development Strategy, developed pursuant to Section 1420(c) of the Safe Drinking Water Act. The objective of the "Capacity Development Strategy for Idaho" is to improve the ability of public water systems to continually produce safe and reliable drinking water.

- **Operator Certification Program.** The DEQ has submitted draft revisions to this program reflecting changes made in the administration of this program. A governor-appointed board now implements all procedures regarding the licensure of operators while DEQ continues to offer training (including the expense reimbursement project), classifies systems, and ensures compliance with the requirement that facilities have properly licensed operators.

- **Public Water System Security.** DEQ provides information, technical assistance, and training to Idaho's water systems regarding drinking water security.

Idaho's Out-of-Compliance Systems Fall into Five General Categories

- 1. Violations due to frequent small system operator turnover.** Frequent turnover in small system operators and poor record keeping contribute to an ongoing loss of institutional memory about monitoring requirements.

To help solve this problem, DEQ and the state's seven district health districts provide frequent and extensive training opportunities that include bacteriological monitoring techniques and frequencies.

For a water system with a contamination detection, DEQ offers one-on-one assistance to identify the problem and to help with the more complicated follow-up monitoring requirements.

- 2. Violations due to the complexity of chemical monitoring.** Chemical monitoring requirements are much more complex than bacterial monitoring requirements.

Currently, approximately 90 different chemical contaminants are regulated. (Other than nitrate, most chemical monitoring was due in 2004.)

A variety of factors can affect the monitoring deadlines for chemical contaminants in different ways. For example, the selection of the sampling collection point depends on the specific contaminant and, in some cases, on other risk factors that the water system must determine.

Because of the complexity of the regulations and in an effort to reduce monitoring and reporting violations, DEQ has automated the monitoring schedule and notifies systems annually of the reporting requirements. DEQ

explains the type of monitoring required and when to perform it.

- 3. Violations due to inadequate financial capacity to correct contaminant or supply problems.** Some violations are due to inadequate treatment resulting from the financial inability to implement the treatment requirements.

Treatment violations are typical of public water systems that serve small populations but have extensive and costly water treatment needs. A good example is a water system that serves around 30 homes, but is required to install filtration because it draws water from a surface water body.

Small water systems of this type may need to spend several thousand dollars per person served to bring the water quality up to acceptable standards for public water systems.

The 1996 Amendments to the Safe Drinking Water Act provided for a *low interest revolving loan fund* to help small water systems facing difficulties.

Although this fund does not offer a solution to every financial problem, it will go a long way toward helping some of the water systems with the greatest need.

DEQ has lowered the interest to 2% for installation of required drinking water treatments. The state awarded the first loans in 1998, and continues to do so on an annual basis (see **Drinking Water State Revolving Fund**, page 4).

The Amendments also offer incentives to states to develop programs to help water systems develop the managerial,

technical, and financial capabilities to solve their own problems.

The DEQ continues to administer the state's *Capacity Development Strategy* in order to provide this type of assistance to public water systems (see **Capacity Development Program**, page 4).

4. **Violations that are false due to poor data quality.** DEQ's intensification of data quality assurance and enforcement efforts has been successful in reducing the number of systems incorrectly identified as significant non-compliers.

In 2004, DEQ reduced errors by continuing to upgrade its data management system. Of course, no database of this size will be completely without errors, but DEQ continues to apply various data verification checks to correct data when errors are found.

5. **Violations that occur due to neglect or refusal to follow state regulations.**

When financial limitations are not a factor and DEQ has explained how to deal with a particular contaminant problem, continued violation by a water system is often due to repeated neglect, or in some cases, due to a refusal to conduct required monitoring. Formal enforcement becomes the appropriate action in such cases.

Enforcement

Idaho responds to reported violations by offering technical assistance to resolve the water system's problem. If a system ignores offers of assistance, then the next step is a series of escalated compliance letters followed by formal enforcement action, if all else fails.

Formal enforcement actions usually carry a monetary penalty with provisions for a larger penalty if violations continue. *In 2004, DEQ issued 4 Notices of Violation and 14 Consent Orders.*

The primary objective of every enforcement action, however, is to ensure safe drinking water by bringing the system back into compliance with the state and federal drinking water regulations.

For your information, this 2004 Drinking Water Contamination Violations Report lists individual system violations for 2004 (see attached *List of Systems with Monitoring and Contamination Violations in 2004*).

Definition of Terms Used in the “2004 Public Water System Violations” Table Located on Page 8

- **MCLs.** Under SDWA, the EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as maximum contaminant levels (MCLs).
- **Monitoring/Reporting.** For this report, significant monitoring violations are defined as any major monitoring violation that occurred during a specified report interval.

A major monitoring violation (except for the Surface Water Treatment Rule) occurs when no samples are taken or no results are reported during a compliance period.

A major monitoring/reporting violation of the Surface Water Treatment Rule occurs when fewer than 10% of the required samples are taken or no results are reported during a reporting interval.

A minor violation occurs when some but not all of the required numbers of samples are taken.

- **Treatment Techniques.** For some SDWA regulations, the EPA establishes treatment techniques (TTs) in place of MCLs to control unacceptable levels of certain contaminants. For example, there are treatment techniques for viruses, bacteria, and turbidity.
- **Consumer Notification (CCR).** The Consumer Confidence Rule requires Idaho's 748 community water systems to distribute annual water quality reports, known as Consumer Confidence Reports (CCRs), to their customers.
- **Return to Compliance (RTC).** This designation indicates that a system that was previously in violation of a requirement is now considered as being in compliance, either because it corrected the violation or is no longer required to do so.

Public Water System Violations - 2004 Annual Compliance Report

Statistics shown are based on the 2004 figures in the Federal database as of 06/04/2005

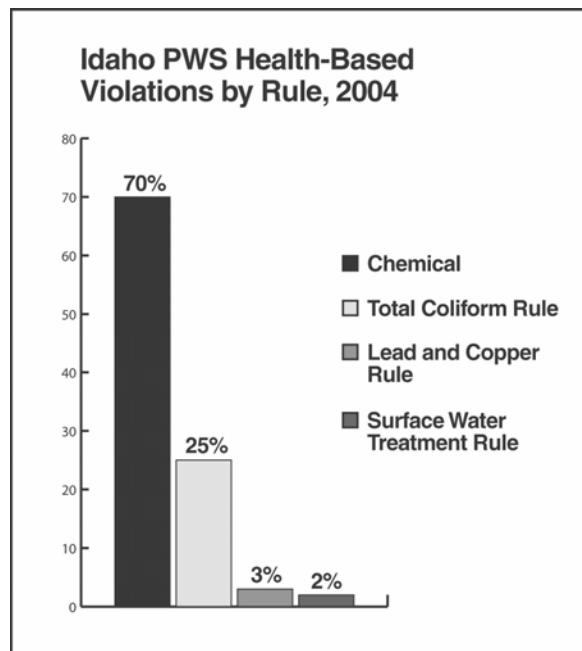

Violations Category	MCLs *1			Monitoring			Treatment Technique			Consumer Notification (CCR)		
	Violations	RTC	Systems in Violation	Violations	RTC	Systems in Violation	Violations	RTC	Systems in Violation	Violations	RTC	Systems in Violation
Chemical Contaminant Group	16	1	12	1,464	55	272	0	0	0			
Total Coliform Rule	171	13	134	349	50	292						
Surface Water Treatment Rule	0	0	0	30	0	6	15	2	9			
Lead and Copper Rule				50	29	40	9	0	9			
Consumer Notification CCR See *2 below, "CCR Violations."										0	0	0

Total Number of Systems in Violation	638	A note about the “Total Number of Systems in Violation” category: A public water system may be out of compliance with more than one contaminant group or rule, but when calculating the total number of systems in violation, <i>the system is counted no more than once</i> . Consequently, the sum of the category to the left entitled “Total Number of Systems in Violation” is a lower number than the sum of the total number of systems in violation shown in the Violation Categories in the table above.
Total Number of Violations	2,104	<p>Notes:</p> <ul style="list-style-type: none"> *1. Definitions for MCL, Treatment Techniques, Significant Monitoring, RTC, Consumer Notification, and RTC used in the table above, are given on page 6. *2. CCR Violations: A SDWIS/Fed module is not available to track compliance for Consumer Confidence Reports (CCRs) and therefore, the information for the number of violations is unavailable at this time.

Summary

In summary, there are some general observations about the state's 2004 Annual Compliance Report and the reported violations.

- **Monitoring/Reporting.** Based on the PWS Water System Violations table (page 8), *90% of all violations were for failure to either conduct or report specified monitoring activities.*
- **MCL Violations.** Nine percent (9%) of the MCL violations were Total Coliform Rule and Chemical Contaminant MCL violations. (An MCL violation refers to a contaminant detected in a drinking water sample at a level above the maximum contaminant level.)
- **Treatment Technique.** Treatment Technique violations (Surface Water Treatment Rule and Lead and Copper Rule) accounted for 1%.

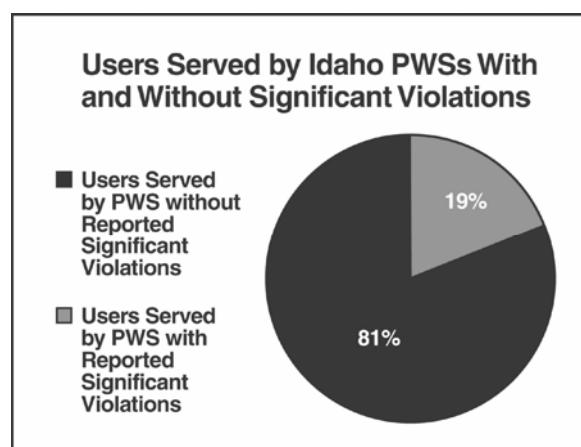

- **Systems Serving 500 or Less.** The majority (91%) of all violations were reported by "very small" water systems (i.e., those systems serving a population of 500 or less).
- **Systems with No Violations.** Sixty-nine percent (69%) of all public water

systems reported no violations of any kind for calendar year 2004.

- **Users Served with and without Significant Violations.** Eighty-one percent (81%) of the population served by public water systems received drinking water from a system that reported no violations of health-based standards, and was not cited for a significant violation of a monitoring and reporting requirement.

Idaho is constantly working to find new and better ways to ensure safe drinking water. The program not only offers information to keep the 2,020 public water systems informed of monitoring requirements, it provides technical assistance when contamination is found and offers help for systems that want to invest in preventive measures.

The Idaho Drinking Water Program remains committed to maintaining the high quality and safety of drinking water that the state presently enjoys.

Report Availability

Summary copies of this report are available on the Department of Environmental Quality's web site at http://www.deq.state.id.us/water/data_reports/drinking_water/acr_04.pdf, and at DEQ's six regional offices and the state's seven district health departments. Copies of the full report can be reviewed at the same locations.

List of Systems with Monitoring and Contamination Violations in 2004

- General Comments -

- Note: Report Data Covers 2004 Calendar Year.** The data included in this report covers the 2004 calendar year, and therefore, some information may no longer apply to current drinking water system conditions. *For example, a system that was in violation in the year 2004 may no longer be in violation in 2005.* Any decisions based on the automated information contained in this report should be verified in detail.
- Locating a System.** 1) On the following list of 2004 system violations, find the county in which the system is located. 2) Next, since all systems are listed alphabetically within that particular county listing, it should be easy to find the system you are looking for.

If you cannot find a particular public drinking water system in the violations list, then that indicates that the system had no violations in calendar year 2004.

- Glossary of Terms Used in the Report.**

CDS	Compliance Decision Support System
MCL	maximum contaminant level
M/R	Monitoring and Reporting Violations
OCCT	Optimal Corrosion Control Treatment
PB/CU	lead/copper
SOWT	Source Water Treatment
SWTR	Surface Water Treatment Rule
TCR	Total Coliform Rule
VOC	volatile organic chemicals

- Consumer Questions.** If, as a consumer, you have any questions about a particular public water system, contact the water system itself or the Department of Environmental Quality regional office or district health department that has jurisdiction over the system.

See the chart on page 12 to determine which office to contact based on the county or Public Water System Number (PWS #). (*As a note:* The first three numbers of a PWS # determines the county that a system is located in. For example, all systems with a PWS # that begins with the numbers "401" are located in Ada County.)

Addresses and telephone numbers for the six DEQ regional offices and the seven district health departments are located on page 10.
